Tetsuo AI

Your gateway to the Solana marketplace
Trusted trading via Phantom & Photon
Enhanced with AI services and live voice chat

At TETSUO, we bring together a global community of C and Assembly developers, deep learning experts, and mathematicians to build open-source solutions that push hardware performance. While shaping an agentic framework in C on Solana, we also drive fresh platforms and projects that spark collaboration and innovation among developers everywhere.

App Features and Architecture

PHANTOM

Phantom wallet is the most trusted and user-friendly wallet in the Solana ecosystem with over 3 million active users

JUPITER

Jupiter is Solana's premier aggregator that finds the best prices across all DEX for us to present through our apps

USER XP

Our front-ends are not just user interfaces, they are user experiences. We currently have both a browser plugin and a responsive modern web application to access our services

Features and Architecture

MARKET DATA

Access the latest market data through our app

CHAT

Talk with our AI in natural language or use !bang commands to access our integrated services

MEDIA

Generate videos and images directly in the app to share on social media

Tetsuo Core Services

API Marketplace
Monetization

Features and Architecture

APIs

The Tetsuo Core Services is an API service layer that provides access to an ever growing set of features for our applications

Platform

The Core Services are a platform that can be extended by plugging in our own or third party APIs for future monetization

Analysis

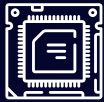

Part of the core set of features are market analysis tools such as monitoring whale activity, pulling sentiment analysis from exchanges or social media. We also have a financial quantitative analysis library ready to perform analytics on collected market data

Features and Architecture

Memes

Sticking with the roots of the community, we offer meme generation through our app, including AI image prompting and our own community developed image animation and manipulation APIs

Video

In addition to image manipulation, we offer access to our in-house developed [KenSub](#), a video summarization and viral clip generator through our APIs

Agents

You can currently interact with our apps using natural language and will soon be able to leverage AI agent based behaviors which can perform chains of actions to bring you enhanced market analysis or auto-trading options

Roadmap and Team

Q1

- **Agentic Behaviors**
- **Additional market analysis API integrations**
- **API Marketplace Website**
- **Monetization Whitepaper**
- **Monetization Integration**
